

RESOLVING BLADED FONT AND GUI DISPLAY ISSUES

Sometimes the Bladed user interface does not display correctly. Text and images appear the wrong size.

This tends to happen more frequently with computers configured with Chinese, Korean or Japanese settings, but it can also occur when opening Bladed via different Windows operating system versions.

Possible workarounds are described here.

1.1 Display Settings

The first thing to try is to make sure the font sizes are set to 100% in Display Settings:

1. On Windows 10 search for *display* in the start menu. Open Display Settings.
2. Under *Scale and Layout* there is a dropdown for changing the text size. Choose 100%.

Changing the screen resolution can also sometimes help (also adjustable in Display Settings).

1.2 Registry fix

If the Display Settings fix in 1.1 doesn't help, try running the 'Font Fix.reg' registry file found in the same section of the Bladed Portal as this guide.

1. Log onto the machine with display issues using an administrator account. This is required because elevated rights are needed to apply registry changes.
2. Download 'Font Fix.reg' from the Bladed portal.
3. Double-click the downloaded file to run it.
4. Once the registry file has been imported, reboot the computer.

1.3 Compatibility trouble-shooter

The compatibility trouble-shooter is a Windows feature that helps fix compatibility problems with newer versions of Windows.

1. Find Bladed_m72.exe in Windows Explorer (e.g. *C:\Program Files (x86)\DNV GL\Bladed 4.9\Bladed_m72.exe*).
2. Right-click the .exe file and choose *Troubleshoot compatibility*.
3. Choose the option *Troubleshoot program*.
4. Choose *The program opens but doesn't display correctly* and click Next.
5. Choose *Program does not display properly when large scale font settings are selected* and click Next.
6. Choose *Test the program...*
7. If successful, choose *Save these settings...* option.
